INTRODUCTION

The data presented in this report are national and provincial/territorial in scope. Unless otherwise indicated, the data are correct as of January, 1987. The general tabular format is by location (provincial/territoral), area (in hectares), year established and type of natural area being protected.

A summary table is provided for Canada (federally protected lands) and each province/territory. The federal properties include Migratory Bird Sanctuaries, National Wildlife Areas, National Parks, National Historic Parks and selected National Capital Commission properties. For each province/territory, natural areas differ in classification. Included are provincial parks, regional parks, ecological reserves, conservation areas, game sanctuaries, wildlife reserves, etc. Where applicable, archaeological sites are included. Historic sites are not included as most are not natural areas, rather built structures.

The accuracy of the data rests with the federal, provincial and territorial agencies which administer the natural areas identified. The agencies verified the figures contained in this report.

The statistical tables of Heritage Conservation - The Natural Environment are presented in a loose-leaf, tabular format. The areal data of Canada's natural environment is always in a state of flux with new areas being added. Thus this loose-leaf format permits a ready means of amending and updating individual tables as changes occur.
